## Ecometer™

**Gilbarco Veeder-Root's Ecometer™ is the retail fuelling industry's most accurate metering device.**

Conventional meters can cost retailers with high throughput more than 13,000 litres annually in lost fuel. This adds up to thousands of Euros in lost profits. Gilbarco Veeder-Root

has developed a way to get those profits back: the Ecometer™ axial flow meter. With over 100,000 units installed worldwide, the Ecometer™ is the industry's only field proven advanced meter technology.

The Ecometer™ is now available in Ultra High Flow for factory fit or retrofit options.

**Proven**

- > Over 100,000 Ecometers™ installed globally
- > Over 95 billion litres dispensed
- > More than a decade of documented field performance in over 30 countries
- > Retailers have already saved over 90 million litres in lost fuel

**Protected**

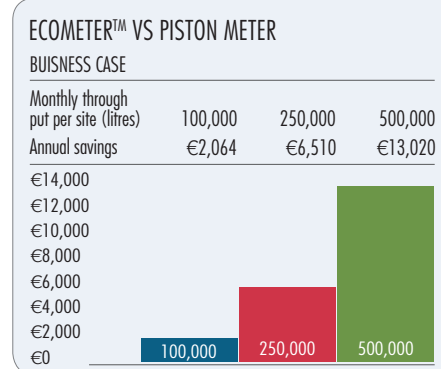

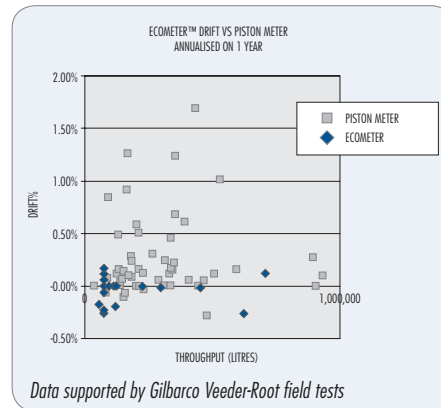

- > Integrated Pulser improves security
- > Better protection against tampering, fraud and theft

**Precise**

- > 75% fewer moving parts than traditional piston meters
- > 33% fewer leak points than typical piston meters
- > Precision tolerances for improved meter accuracy

**Profitable**

- > Lower maintenance and calibration costs
- > Short payback period

**Key Benefits of Ecometer™**

1. No touching parts means minimal wear and minimal meter drift leading to reduced fuel losses & fewer re-calibrations.
2. Low pressure loss and smooth linear flow across the meter, means higher flow rates and eliminates "Pulse Bunching" leading to more accurate metering.
3. Less than half of the leak points of a typical piston meter, no possible friction leak points means very low chance of leakage.
4. Electronic calibration enables simpler and quicker servicing.
